

Filtered Reports

This option allows you to choose the specific reports that you want to print by selecting the options that are shown in dialogue below. From this option you will enter the SCD Ad Hoc Report for Functional Measures option, then you will build and print your reports. When selecting filters for your reports, it is important not to select too many filters - this may result in getting a report with no data. In some cases you should not choose any filters; just answer NO at the prompt "Do you wish to use the SCD filters with the reports".

```
Select SCD Reports Menu Option: FIL Filtered Reports
Do you wish to use the SCD filters with the reports? YES// <RET>
```

Up Front Filters:

Clinical Functional Measures

This option prints a patient's functional status data. You may select ALL patients or you may select one patient as shown below. If you select ALL patients the system will use filters if you have answered YES to the prompt "Do you wish to use the SCD filters with the reports" under the Filtered Reports option. System prompts and user entries are illustrated below.

Follow-Up (Last Annual Rehab Eval Received)

You must be authorized to invoke this option (i.e., you must possess the SPNL SCD PTS security key), thus preserving patient confidentiality.

This report identifies patients who have not had a physical exam within a specified period of time.

As shown below, you are prompted to select that period of time. This is the period which the Follow-Up (Last Annual Rehab Eval Received) report uses. The system default is 180 days and is displayed as (180D//). It can be changed through the Site Parameters menu by an authorized user (i.e., possessing the SPNL SCD MGT key).

The system identifies all patients who have not had a physical exam during the selected period of time, and the last four digits of their SSN are listed under the column heading "Last Four".

Inpatient/Outpatient Activity

This option produces reports on inpatients and outpatients during a specific range of dates.

Note: A “stop” is credited for each entry of a stop code, while a “visit” is distributed among each stop credited on a given date. Thus, a single visit with two stop codes credited shows as 0.5 visit for each stop code. A total of 1.00 visit is given for outpatient activity on a given date.
